DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-28, drawn to an antenna, classified in class 343, subclass 700ms.
 - II. Claims 29-47 and 63-65, drawn to a meter register, classified in class 340, subclass 870.02.
 - III. Claims 48-62, drawn to a method to measure a utility, classified in class 340, subclass 870.02.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions III and II are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the process is claimed in limitations that do not require the specific elements recited in the apparatus claims. These process limitations could be carried out by an apparatus with different elements than those recited in invention II. Also, the apparatus in invention II is capable of being used to practice a different process than the process recited in invention III since the elements of invention II are not limited to the specific order or steps or recited steps of invention III.

3. Invention I is unrelated to inventions II and III. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the different inventions have different modes of operation. The antenna of invention I transmits RF signals as its mode of operation. The apparatus and process of inventions II and III, while operating an antenna, primarily measure and display a sensed variable quantity as their mode of operate. The mode of operation of inventions II and III concerning the antenna is only a small part of the total mode of operation of these two inventions.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Because these inventions are distinct for the reasons given above and the search required for each invention is different, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

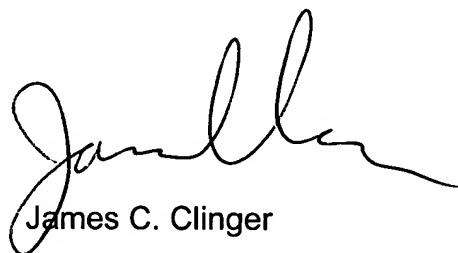

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
